

s1.What is the primary purpose of a primary key in SQL?

- A) Ensure data redundancy
- B) Uniquely identify each record
- C) Establish a connection between tables

Correct Answer: B) Uniquely identify each record

2.Which key is used to establish a relationship between two tables?

- A) Primary Key
- B) Foreign Key
- C) Unique Key

Correct Answer: B) Foreign Key

3.Which of the following statements is true about a Unique Key?

- A) It allows duplicate values in a column
- B) It uniquely identifies each record in a table
- C) It is used for table relationships

Correct Answer: B) It uniquely identifies each record in a table

4.Can a table have multiple primary keys?

- A) Yes
- B) No
- C) Only in special cases

Correct Answer: B) No

5.What will happen if you try to insert a duplicate value into a column with a UNIQUE constraint?

- A) Data will be inserted
- B) SQL will ignore the duplicate value
- C) SQL will throw an error

Correct Answer: C) SQL will throw an error

6.Which SQL statement is used to delete a table completely?

- A) DROP
- B) DELETE
- C) TRUNCATE

Correct Answer: A) DROP

7.Which language category does the SELECT statement belong to?

- A) DML
- B) DQL
- C) DCL

Correct Answer: B) DQL

8.Which SQL command is used to update records in a table?

- A) UPDATE
- B) MODIFY
- C) ALTER

Correct Answer: A) UPDATE

9.Which of the following is a Transaction Control Language (TCL) command?

- A) COMMIT
- B) SELECT
- C) DROP

Correct Answer: A) COMMIT

10.What is the primary function of the ROLLBACK command?

- A) Save the changes made by a transaction
- B) Undo the changes made by a transaction
- C) Delete the table structure

Correct Answer: B) Undo the changes made by a transaction

11.Which SQL join returns all records from both tables, with NULLs for unmatched records?

- A) INNER JOIN
- B) FULL JOIN
- C) LEFT JOIN

Correct Answer: B) FULL JOIN

12. In which join are all records from the left table and matching records from the right table returned?

- A) RIGHT JOIN
- B) FULL JOIN
- C) LEFT JOIN

Correct Answer: C) LEFT JOIN

13. Which type of join returns all records from the right table and matching records from the left table?

- A) INNER JOIN
- B) RIGHT JOIN
- C) FULL JOIN

Correct Answer: B) RIGHT JOIN

14. What happens when there is no match in a FULL JOIN?

- A) It returns NULL for unmatched columns
- B) It throws an error
- C) It returns only the matched rows

Correct Answer: A) It returns NULL for unmatched columns

15. Which keyword is used to specify the join condition in SQL?

- A) WHERE
- B) ON
- C) USING

Correct Answer: B) ON
